Android Lead Developer (m/f/d)

Description

The demand for digital customer solutions in the energy industry is increasing enormously. We see energy suppliers as an important part of a future smart city and want to create a leading ecosystem for intelligent cities. An IT solution that meets the utility's needs and its future role will require much greater technical expertise and a different approach. Based on a modern cloud architecture, our new product offers a strong and flexible solution to map multiple applications from different providers in a uniform and simple way. In order to work together on something big, we are looking for you to join our team of 13 skilled developers.

Our product provides utilities with an end-user app, which they can easily configure to their specific situation. We include functionality for engaging customers (e.g. e-Bike rental) and servicing customers (e.g. meter reading via smartphone). It is open to third parties to nurture innovation. In addition, there is an extensive data platform included which allows a deep understanding of user preferences.

Responsibilities

- You are the new, very experienced part of our agile Android team.
- You are a developer with heart and soul and therefore you like to code it yourself.
- You invest about a third of your time in team development and coaching.
- You like to communicate and bring our culture and product vision into your new team.You support management and CTO in establishing sustainable and efficient development processes in the team.
- You love new technologies and apply them.
- You support the CTO in technical decisions.

Qualifications

- You have at least 5 years of applied Android coding experiences, 2 years of which you should have been in touch with Kotlin.
- Jira, Slack, GIT, Jenkins, REST and JSON are no foreign words for you.
- The handling of Android Studio, Java and Kotlin are easy for you.
- You have a good knowledge of software design.
- You have worked in agile teams, in scrum style sprint organizations and shipped/launched software that was well-received by end-users in at least 5 projects.You strike a balance in between striving for perfection and solid code vs. getting stuff done in time.You truly measure yourself against progress from an end-user perspective.
- You can communicate very well in English.
- Ability to work in a team, initiative, quality awareness, communication skills and fun in development round off your profile.

Job Benefits

Your job comes with personal responsibility, freedom and short decision-making routes, just as you would expect it from a dynamic start-up. And most importantly you will work with a motivated, international team full of fellow developers.

Hiring organization
endios GmbH

Employment Type
40h/w
